

POLYFIN AG

Flat Roof Technology for the Future

The company

We put the future on the right track

Innovative, customer-oriented solutions developed as a result of decades of experience in the field of roofing and waterproofing membranes.

Gläserne Manufaktur building,
Dresden

POLYFIN AG is one of the world leading manufacturer of roofing and waterproofing membranes made of FPO/PE (Flexible Polyolefines) and ECB (Ethylen-Copolymer-Bitumen).

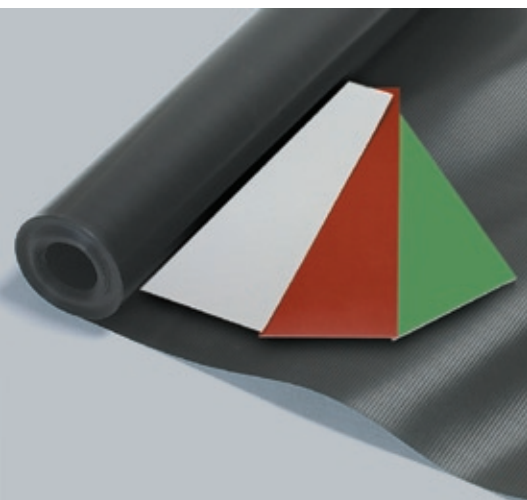

More than 40 years of development and production of plastic waterproofing membranes and more than 50 million m² applied membranes worldwide attest to quality and experience.

All our knowledge and our expertise has only one aim in mind: **innovative solutions.**

We are a medium-sized company that enjoys success not only in Germany, but on the international market as well – which means that our customers can benefit from the synergy that opens up whole new areas of potential.

The products

innovative • flexible • futuristic

Our motto is versatility. Whether it's for a new building or a renovation, we provide you with products that meet the very highest standards. We're always up to speed with the latest technology, enabling us to meet current and future requirements.

The range of colours offers greater design freedom in the selection of products. Our membranes are easy to use and are extremely durable.

Our wide range of accessories is adapted to our membranes and available in the same colours.

POLYFIN products are used to **provide tomorrow's solutions – today.**

Research & development

Forward thinking means ecological planning

The performance requirements of a flat roof change constantly. There are not only commercial pressures, but the evolution of nature plays a part as well. That's because the continuous changes in our weather pattern mean that roof constructions are constantly faced with new challenges. We face up to these challenges by continually improving and refining our products. Our roofing membranes are designed for the future. They are characterised by extreme longevity and, thanks to their environmental compatibility, make an important contribution to nature conservation as well. What's more, they are produced by the latest and most innovative means of manufacture and development. Our objective is longevity, which is why we design our products to meet the challenges that your flat roof will face in the future.

The service

Flexibly tailored to your needs

No flat roof is like another, that's why we make sure our service is like our membranes: flexible! We offer a large selection of standard products, but we are also able to supply products that are tailored directly to you and your own special needs.

We're also happy to support you in your projects. We believe that being close to our customers on site is very important, because it is the only way that we can react quickly and reliably to all your concerns and ensure that our expertise is available whenever you need it.

We adapt to your requirements and offer solutions that are as flexible and unique as your expectations.
